RESULT 1 AAB20389

AAB20389;

21-JUN-2001 (first entry)

AAB20389 standard; Peptide; 12 AA.

Anti-FIX/FIXa antibody 193/K2 CDR3.	
Factor IX; FIX; Factor IXa; FIXa; antibody:	procoa
Factor VIII cofactor; blood coagulation disorder; haemonhilia A	rder:
haemorrhagic diathesis; haemostatic; amidolytic; therapy; mouse	tic: t
complementarity determining region, CDR.	1
Mus musculus.

(BAXT) BAXTER AG.	
Scheiflinger F, Kerschbaumer R, Falkner F,	Dorner F;

New factor IX/factor IXa antibodies and their derivatives useful for

WPI; 2001-290358/30.

Result No.

increasing amidolytic activity of factor IXa, and for treating blood coagulation disorders such as haemophilia A and haemorrhagic diathesis

Kaposi's sarcoma associated herpes vitus (EGNY) clone ESS (AMT16806), obdd. from a KS Lesion genomic library; includes IS complete ORFs (AMT16807-2)) named according to their herpesvirus saintri postitional homologues. The major ceptal protein (hAMP3607) the the product of ORFS (AMT16807-2) KSHV proteins and peptides may be obtd. by incorporating encoding sequences into a vector and expression in host cells. They are useful averaged to relate the second artibodies of singer the useful averaged to relate the vectors and expression artibodies of singer the useful average of the singer than the cells.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   18-AUG-1994;

                                                                                                                                         The invention relates to an isolated polymocleotie (1) comprising a muleotide sequence selected from any 6.94 sequences (REZILIS-MEZIZO66) or their nature protein ording portion, active domain coding protein or complementary sequences. The polymocent human genome for identifying expressed genee or for physical mapping as mean genome. The encoded polymoperides (REMESISO) or mapping as many genome. The encoded polymoperides (REMESISO) or mapping and active the second of the second sequences of the sequences of the second sequences of the sequences of the second sequences of the sequences of the second
                                                                parasitic), arthritis, etc.

Note: The sequence data for this patent did not form
specification, but was obtained in electronic format
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 New polymucleotides comprising sequences assembled from expressed sequence tagg (ESYs) useful for tracting cell-proliferative, set of meurodegenerative, autoimmune, genetic, myeloid or lymphoid, or insuredegenerative, autoimmune, genetic, myeloid or lymphoid, or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Human; genome mapping; gene therapy; food supplement; virus; fungus; cell-proliferative disorder; neurodegenerative disease; bacterial; Parkinson's disease; Albheimer's disease; autoimmus disease; bacterial; multiple selerosis; dishetes; genetic disorder; wound; burn; infection; arthritis; cytostatic; immunosodulator; nootropic; neuroprotective; arthritis; cytostatic; immunosoupressive; demandological; antiparkinsonian; antidiabetic; immunosoupressive; demandological; hemosphatic; vulnerary; fungicide; antibacterial; vituoide; procosocide;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Claim 9; SEQ ID NO 1685; 1012pp + Sequence Listing; English

                                                                                                                                                                                                                                                                                                                               or This invention describes movel nucleic acid (cmbh) sequence (h) which the have anticancer activity and are highly expressed in overing tumor tissue (and some also in testis and breast cancer tissue). The products of the invention can be used for gene therapy. (h) are used (i) for recombinant expression of polypeptides (b) and (ii) to isolate complete genes. (B) are used (i) to identify agents suitable for treatment of (in its antibotics of the antipotics of the activity for treating this form of tancers of the activity and the activity of the activity for treatment of a particular antibotics (a) see sharply vectors) and (iii) for generation of specific antibotics (a) see sharply vectors) and (iii) for generation of specific antibotics (a) see sharply vectors) and (iii) for generation of specific antibotics (a) see sharply vectors) and (iii) for generation of specific antibotics as specificantly longer fragment of the same unknown gene, discorring the estimated frequency of this chart of the same unknown gene, discorring the estimated frequency of the same unknown gene, discorring the estimated frequency of the same unknown gene, discorring the estimated frequency of the same unknown gene, discorring the estimated frequency of the same unknown gene, discorring the estimated frequency of the same unknown gene, discorring the estimated frequency of the same unknown gene, discorring the estimated frequency of the same unknown gene, discorring the estimated frequency of the same than the same and the same unknown gene, discorring the section of the same unknown gene, discorring the section of the same and                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          밁

CCC ANZ7135 Abhylásí rapresent human secreted protein fragments. The genes
CC ANZ7135 AbZ7164 rapresent human secreted protein fragments. The genes
CC ANZ7135 AbZ7164 rapresent human secreted protein fragments. The genes
CC and their corresponding secreted proteins are useful for gene
CC the trapy. Secreted protein sequences of the inventum are useful for the
CC diagnosis or treatment of disorders such as autoimmune diseases (s.g.
CC the breast or liver), cerebrovascular disorders (e.g. carciac arrest), narvous
CC the breast or liver), cerebrovascular disorders (e.g. carciac arrest), narvous
CC system disorders (e.g. Alzheimer's disease), infections caused by fungi,
CC bacteria and viruses and coular disorders (e.g. cornela infection). The

therapeutic use

WPI; 2003-310989/30

New human secreted polypeptides and polymucleotides for diagnosing, prognosing, preventing and treating immune, hyperproliferative, likkiney, reproductive disporders and for identifying modulators of

liver,

disorders (e.g. systemic exyphomatosus, rhousatoid arthritis, multiple oclerosis, subcimmums haemolytic ansenda, concerns a uncommume therodytic, autoimmume haemolytic ansenda, concerns expectations expected in the control of the c The invention relates to an isolated polypoptide comprising an amino acid sequence at least 934 identical to sequence of 28 bimman secreted protesins, their fragment, polypoptide domain, spitope, secreted form, variant, allalic variant, or species homologue, or the encoded sequence included in ATCC 97921 and 97922. Also included are the encoding mucheic acids, recombinant vectors, host calls, mathodise, and genes. The protesins and nucleic acids are useful for diagnosing, preventing, treating, proposing or meliorating a medical condition e.g. treating, proposing or meliorating a medical condition e.g. acids immunoceficiencies (e.g. X-linked agammaglobulinemia, B cell immunoceficiencies, severe combined numanicoeficiencies), autolimurie are useful to enhance or inhibit complement mediated cell lysis, TOT

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          estimulating wound and tissue repair, angiogenesis, and the repair of vascular or lymphatic diseases or disorders. They are also useful to prevent hair loss, to medulate mammalian characteristics such as body height, weight, hair colour, and to increase or decrease storage capabilities, fat content, lipid, protein, carbohydrate, vitamiae, milmerals, coffectors or other muritional components. The proteins are also useful for identifying binding partners. The present sequence represents a secreese protein of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   WPI; 2001-663017/76

Commune tissue, it has considered as the human NMA-associated processing thinkary. It is expressed in Incyte clone 265341, derived from UTERROYDO COMMANDERS, it is expressed in Incyte clone 265341, derived from UTERROYDO COMMANDERS as expressed in Incyte clone 2654514, derived from UTERROYDO COMMANDERS as expressed in Incyte clone and infinitely and interest control of the expression of the expression of activity of RNAAD. It is used to treat cell provided and anti-microbial activity commanders in Infectious disorders, like activity of RNAAD. It is used to treat cell provided the expression or activity of RNAAD. It is used to treat cell provided the expression of activity of RNAAD. It is used to treat cell provided the expression of activity of RNAAD. It is used to treat cell to treat the expression provided the expression of activity of RNAAD. It is used to treat cell to treat the expression of activity of RNAAD. The invention relates to isolated polypuchectide (I) and polypeptide (II) sequences (II) is useful as hybridisation probes, polymerase chain reaction (PCN) primers, oligomers, and for chromosome and gene mapping, and in recombinant production for (II). The polypuchectides are also used in diagnostice as expressed sequence tags for identifying expressed spaces, (II) is useful in gene therapy techniques (II) or to treat disease states involving (II) is useful for generating or the production of

                                                                                                                                  quantitating a polypoptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful for treating disorders involving aberrant protein expression or biological activity. The polypoptide and polymocleotide sequences have applications in diagnostics, forenskie, pene mapping, identification of mutations responsible for genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and assume cald sequences. Associolo-Associ77 represent novel human actic sequences of the invention.
Sequence
                                            Note: The sequence data for this patent did not appear in the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.

Sequence 1. Application US/0950368

Patent No. US/020061580A1

APPLICANT Genemor International, Inc.
TITUS OF INVENTION: Alpha/beta Hydrolase-Fold Enzymes
FILE REFERENCE: GS:11-FCT
CURRENT APPLICATION (MORBER: US/09/950,368
CURRENT FILING DATE: 2001.09-10
PRIOR APPLICATION (MORBER: 09/35),666

RESULT 15 US-09-950-368-1

```
PRIOR FILING DATE: 1999-07-20

NUMBER OF SEX LN UNG: 1999-07

SEQ LN UNG: 1999-07

SEQ TO NO. 1

LENGTH: 657

TYPE: PRI

ORGANISM: Bacillus

US-09-960-368-1

Query Match Similarity 66.7%; Pred. No. 6e+02;

Matches 6; Conservative 0; Mismatches 3; Indels 0; Gaps 0;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  protein search, using sw model
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  November 7, 2003, 07:21:18; Search time 1.76235 Seconds (without alignments) 288.098 Million cell updates/sec
